RESEARCH

The biggest problem we noticed while doing the research in kids with ADHD was lack of focus, impulsiveness and multitasking. They unfortunately tend to fall behind academically due to this learning disability.

There aren't a lot of tools right now to help them cope with these issues which is why we wanted to try and create something to help make this already hard process a little simpler and fun!

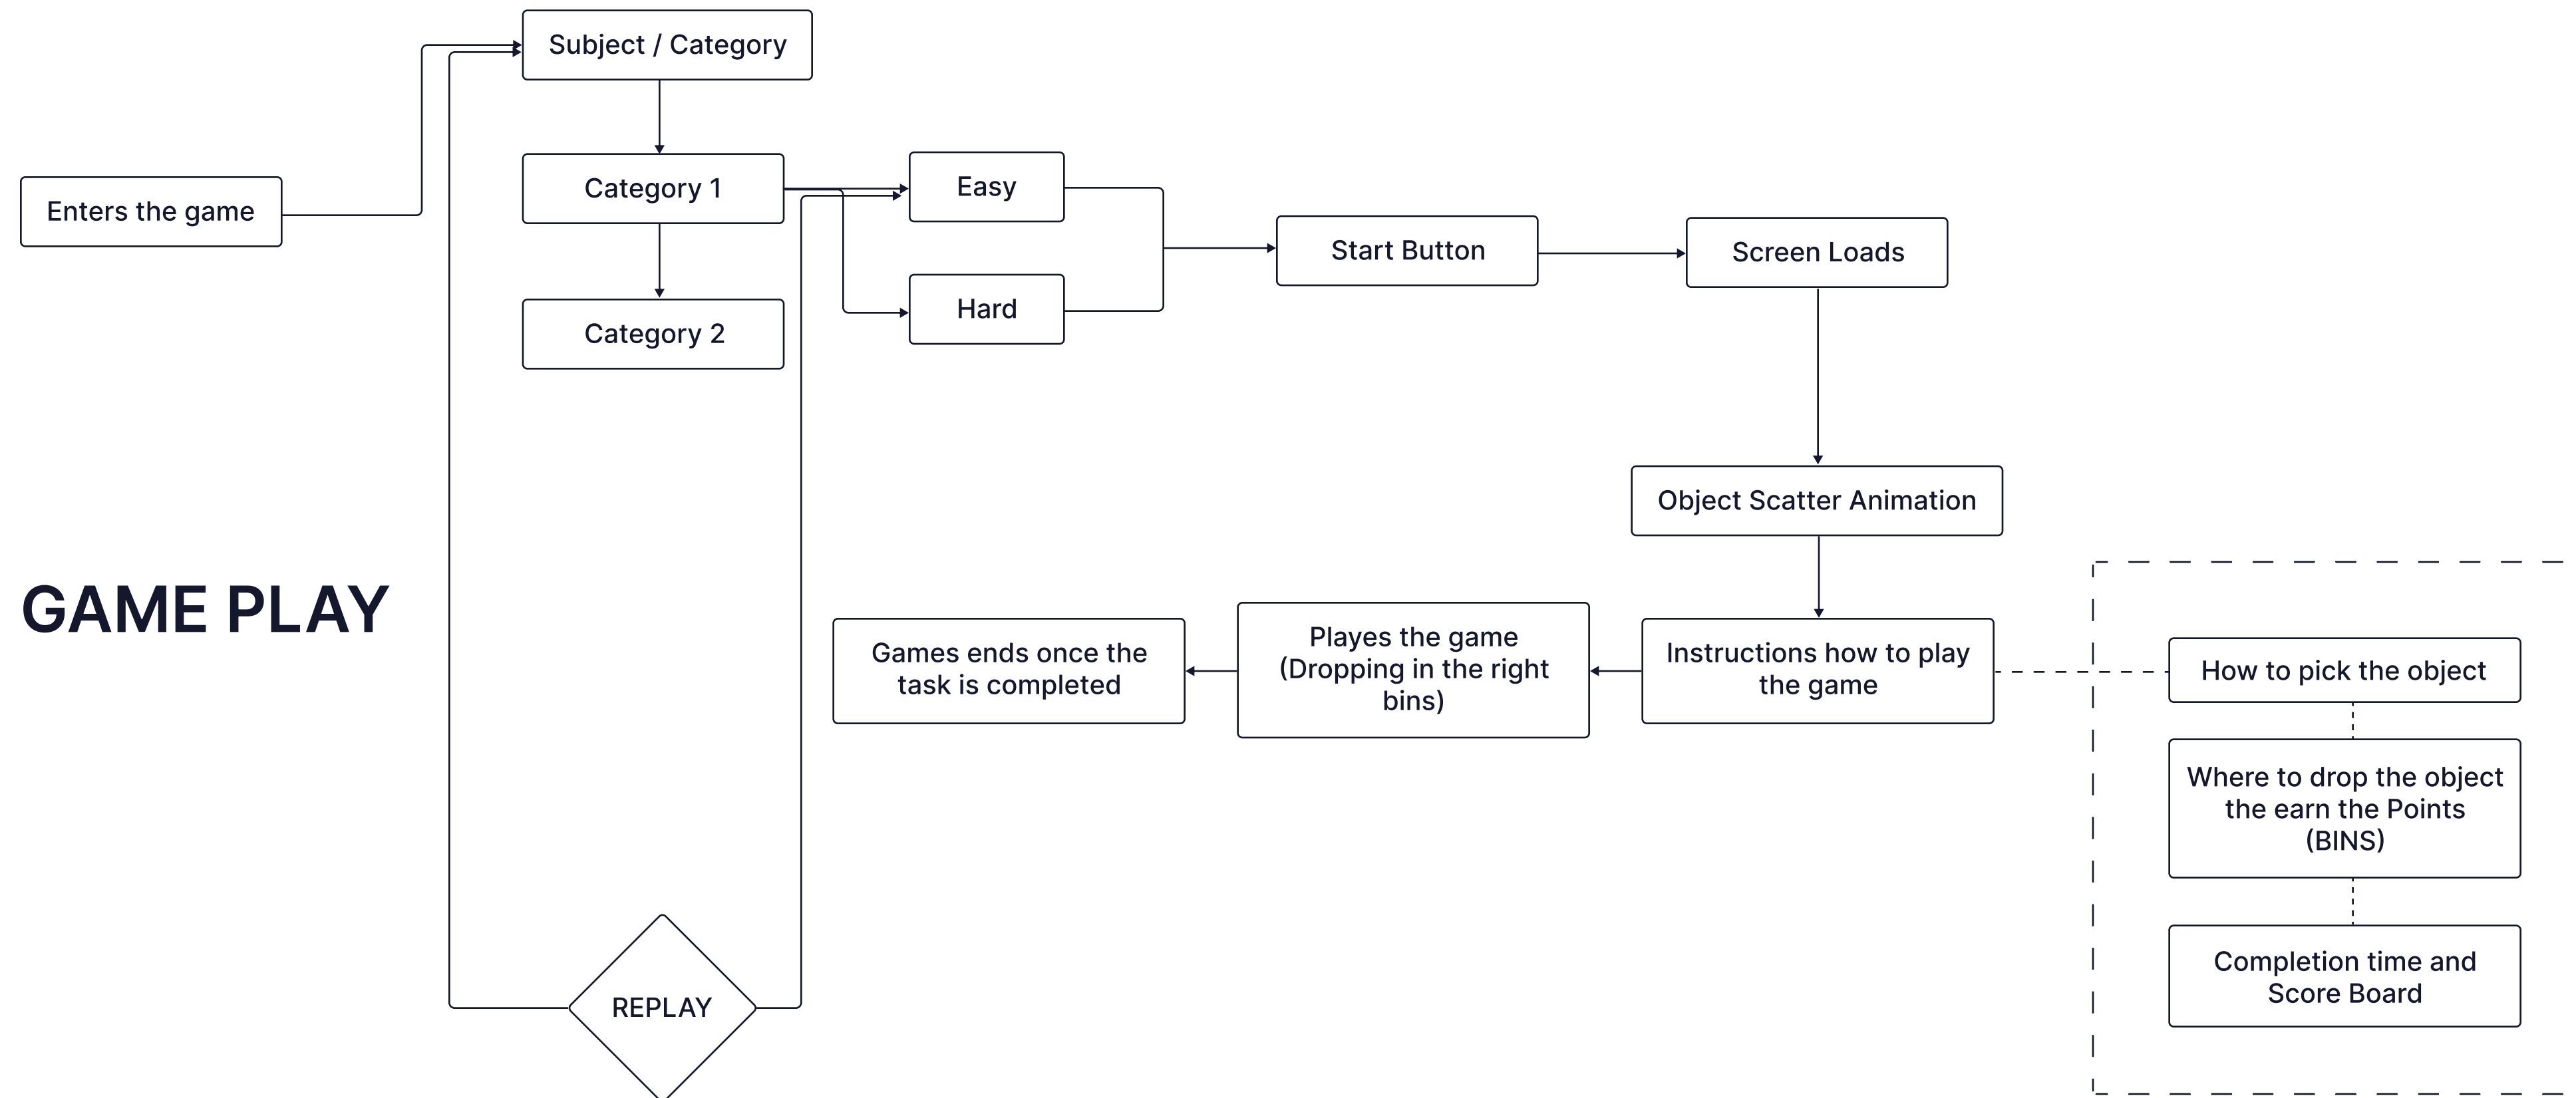

PROBLEM STATNMENT

We want to create a safe space for them where they are able to learn by doing using vision, sound and feelings to retain the content yet still have fun!

IDEA

The game is for kids with learning disabilities such as ADHD which helps them stay focused while keeping them engaged leading to a more effective way of learning!
